

Project 1

Excited to share my week 1 progress as a Data Analytics Intern at Decodelabs and it was a proper deep dive into the world of Data Cleaning & Preparation using Excel!✓

Here's what I tackled on the dataset (1,200 rows of real-world sales data):

Missing Values Identified and filled 309 blank coupon code entries with "No Coupon", preserving every single record without data loss.

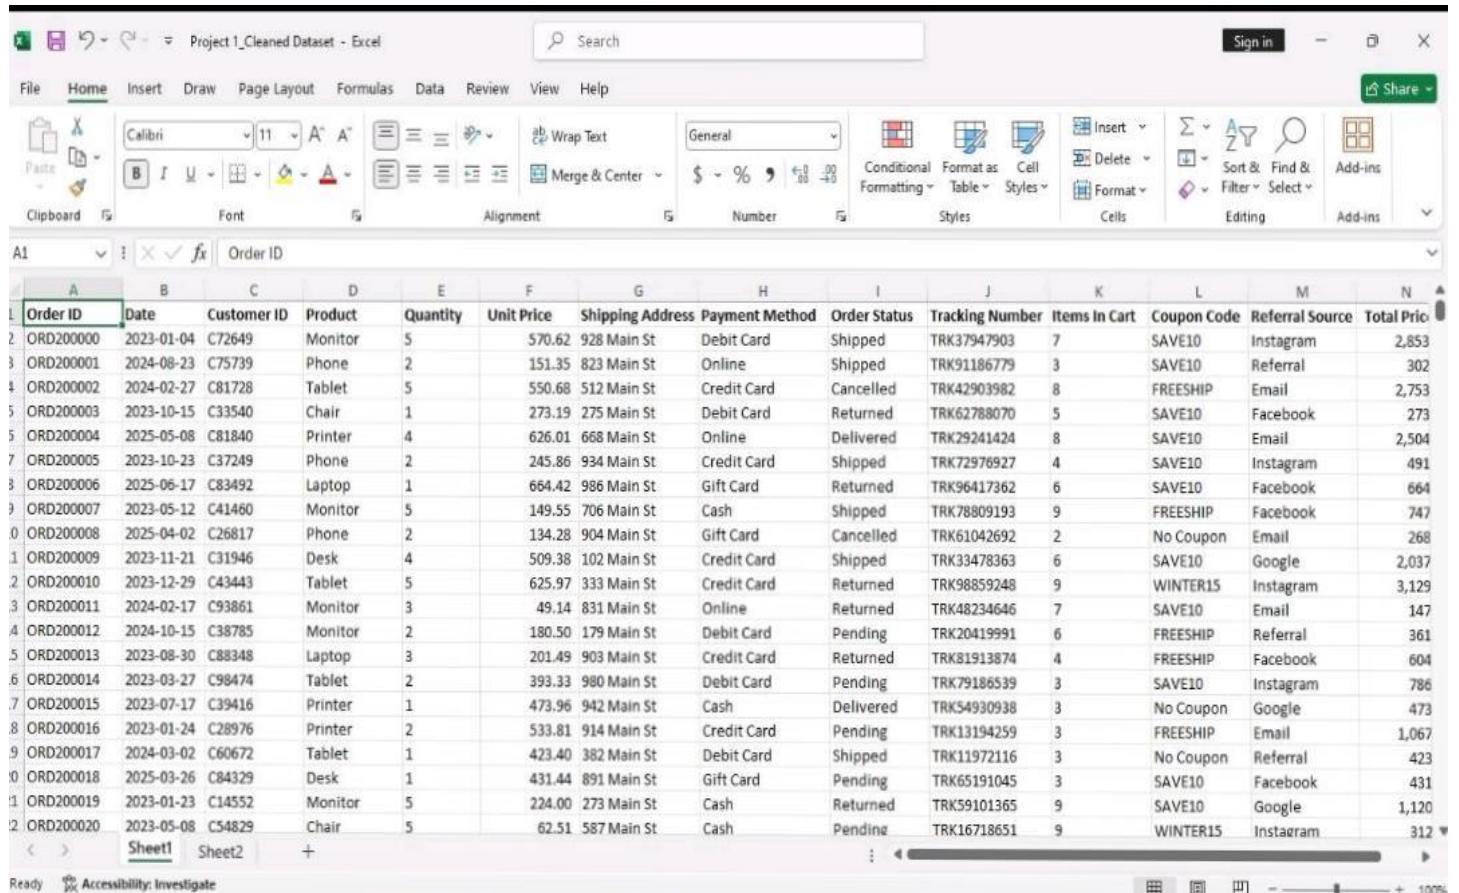

Date Standardization Reformatted the entire date column to a consistent YYYY-MM-DD format, eliminating formatting errors across all 1,200 rows.

Number Precision Formatted Unit Price & Total Price columns to Accounting format, ensuring 2 decimal point precision throughout.

Formula Accuracy - Replaced hardcoded Total Price values with a dynamic SUMPRODUCT(Unit Price, Quantity) formula for arithmetic reliability across the full dataset.

The biggest lesson? Cleaning data isn't just about aesthetics, it's the foundation on which every reliable data insight is built on. Garbage in, garbage out. Clean data in, confident decisions out.

Excel sheet:-

The screenshot displays an Excel spreadsheet titled "Project 1_Cleaned Dataset - Excel". The interface includes the standard Excel ribbon with tabs for File, Home, Insert, Draw, Page Layout, Formulas, Data, Review, View, and Help. The "Home" tab is active, showing options for Font, Alignment, Number, Styles, Cells, and Editing. The spreadsheet contains a table with 15 columns: Order ID, Date, Customer ID, Product, Quantity, Unit Price, Shipping Address, Payment Method, Order Status, Tracking Number, Items in Cart, Coupon Code, Referral Source, and Total Price. The data is organized into rows, with the first row (A1) serving as the header. The table lists various orders, including products like Monitor, Phone, Tablet, Chair, Printer, Laptop, and Desk, with details on their quantities, prices, shipping addresses, payment methods, and status. The bottom of the screen shows the "Ready" status bar and the "Accessibility: Investigate" button.
